National Deworming Day

In Government Post Graduate College, Bazpur, on the direction of **Dr. Rita Sachan**, Principal in-charge of the college, a program was organized on National Deworming Day by NSS Senior Program Officer **Dr. Pradeep Durgapal** and Program Officer **Dr. Darshana Pant**. On this occasion, Senior Program Officer Dr. Pradeep Durg Pal said that stomach worms have adverse effects on human health and if care is not taken, this problem can lead to serious consequences. National Deworming Day i.e. De-worming Day is celebrated to draw attention to the control of stomach worms. In the program, Dr. Pooja Bangla, female doctor of Community Health Center, Bajpur, told that stomach worms like roundworm, hookworm can cause serious problems on the body. These worms are parasites that live in the human body for food and survival and cause anemia and poor nutrition in people, especially children. These worm infestations mainly occur as a result of poor sanitary conditions. Due to which there is anemia in children. Deworming treatment improves the mental and physical development of children and has a good effect on the health and education of children. And also children become free from malnutrition. That is, deworming treatment reduces anemia in children and improves nutrition. On this occasion, deworming medicine Almandajol was distributed to many students of the college. Along with college professors, NSS volunteers and many students registered their presence in the program.
